A Historical Data Sources

TECHNICAL MEMORANDUM No. 1.1.5.8

2002-2005 COUNTY/SUBREGION TIME SERIES

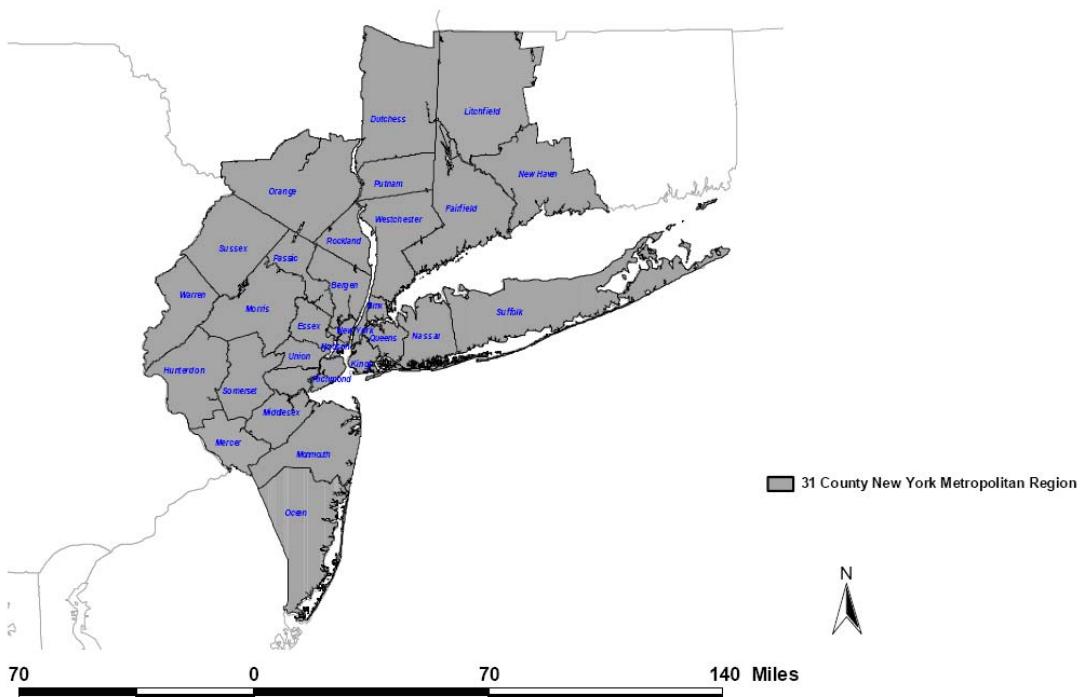

DATA FOR EXISTING MODELS

1.1 INTRODUCTION

Data were collected for the New York Metropolitan Region¹ in order to determine the changing patterns in population growth, birth and death rates, immigration, housing factors, the labor force, earnings indicators, and employment industries relevant to future transportation needs. These data will also be used directly in the construction of socioeconomic forecast models which will be applied to the analysis of future patterns of transportation demand.

Technical Memorandum 1.1.5.8

Map 1. Thirty-One County Region

¹The New York Metro Region includes the following counties, by subregion: New York City subregion: Bronx, Kings, New York, Queens, Richmond Counties; Long Island subregion: Nassau & Suffolk Counties; Mid-Hudson subregion: Dutchess, Orange, Putnam, Rockland, Sullivan, Ulster, Westchester Counties; New Jersey subregion: Bergen, Essex, Hudson, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Somerset, Sussex, Union, Warren Counties; Connecticut subregion: Fairfield, Litchfield, New Haven Counties

The initial focus of this technical memorandum (TM) was to collect the county level inputs for the intervening years since the previous forecasting effort, 2002-2005. In the process of the data collection, it was noted that many, if not all, datasets were rebenchmarked in 2003 or 2004 and the revisions pertained to data going back to 2000, the decennial census year. In order to make certain that all county level data to be used are the most recent revisions, the collected data in this memo include the years 2000-2005 in tabular format.

Historical data from 1970 to 1999 were collected for, and were not altered from, previous technical memoranda. These will be used as inputs to the models. However as they remain unchanged, they are not analyzed in this TM. The historical data sources are included in a table as Appendix A.

The following sections present the sources of and methodology of data collection as well as the key findings of the trends analysis as organized by the major data groups: population, housing, labor force, earnings and employment.

2.1 POPULATION DATA COLLECTION

The population data include detailed statistical information on the Region's inhabitants at the county level and aggregated to subregions for the period, 2000-2005. Annual intercensal estimates for total population at the county level are included for the years 2001 through 2005. These estimates are prepared by the Federal State Cooperative Program for Population Estimates and are provided by the US Bureau of the Census for all thirty-one counties in the NYMTC study area². Population data are estimated as of July 1 of each year. The previous years' estimates are revised annually. The 2000 Population was obtained from the 2000 Census.³

The US Census Population Estimates Program was also used to obtain birth, death and net migration data. Available data include annual figures for total live births and resident deaths at the county level from 2000-2004.⁴ These estimates comprise the actual number of recorded births and deaths in each calendar year.

Statistics for migration data as contained in the previous TMs were prepared by the US Immigration and Naturalization Service (INS).⁵ Immigration data are reported by the intended place of residence of legally admitted aliens by year of arrival. In addition, the US Bureau of the Census prepares their own estimates based upon INS arrivals, but adjusts them to account for the return migration of aliens. The most recent Census Estimates Program published migration data from 2000 to 2005 for domestic and foreign

⁴ Historical Data from Technical Memorandum No. 1.1.1, Population Data Collection and Analysis, 8/21/200 & Technical Memorandum No. 1.1.4, Housing Data Collection and Analysis, 7/10/01.

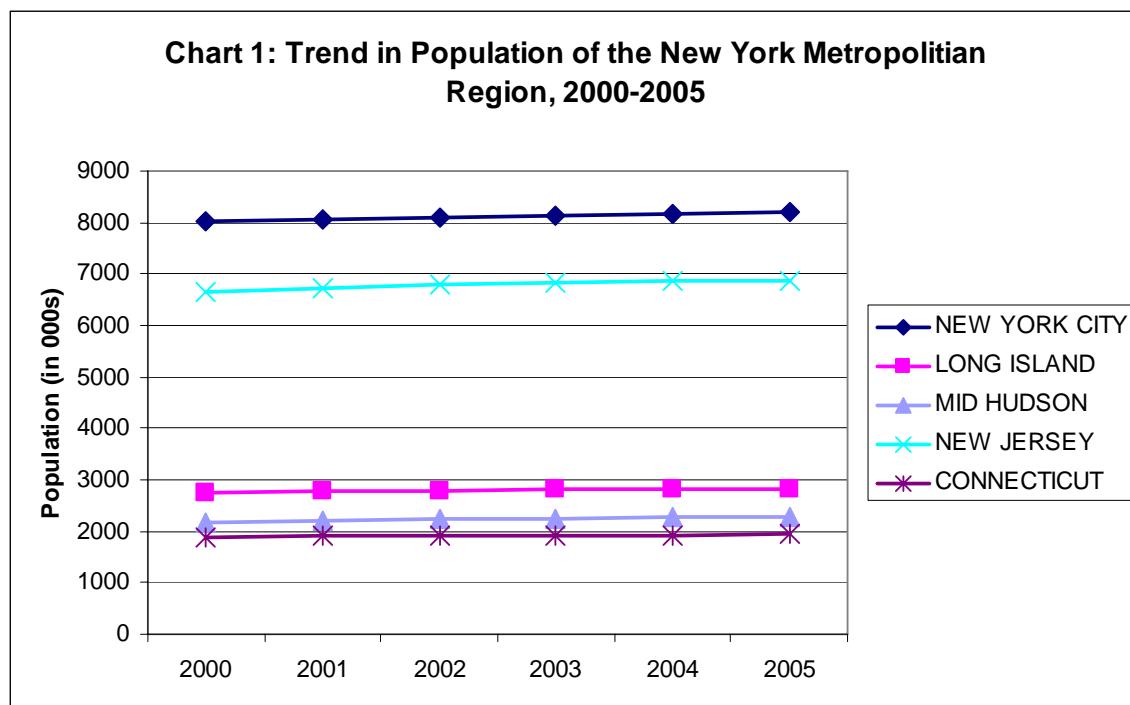

⁵ Technical Memorandum No. 1.1.1., Population Data Collection and Analysis, 8/21/200

migration. Population data for residents living in Group Quarters and in Households were collected for this report as well. Recent data were obtained from the Census Estimates Program for the population in Group Quarters (2000-05). Population in households was derived by subtracting the group quarters population estimate from the total population estimate.

2.2 SUMMARY FINDINGS OF POPULATION DATA TREND ANALYSIS

Total Population

Regional population growth has been slowing since the 2000-2001 growth rate peak. Between these years, the Region grew from 21,491,900 to 21,708,900 residents or by 1.0 percent. Since then, there has been a steady decline in growth rate up to 2005, at which time there had been an increase of 56,000 persons, or only 0.3 percent. This is due in part to the decrease of population in the Long Island subregion. Chart 1 illustrates the overall population growth by subregion

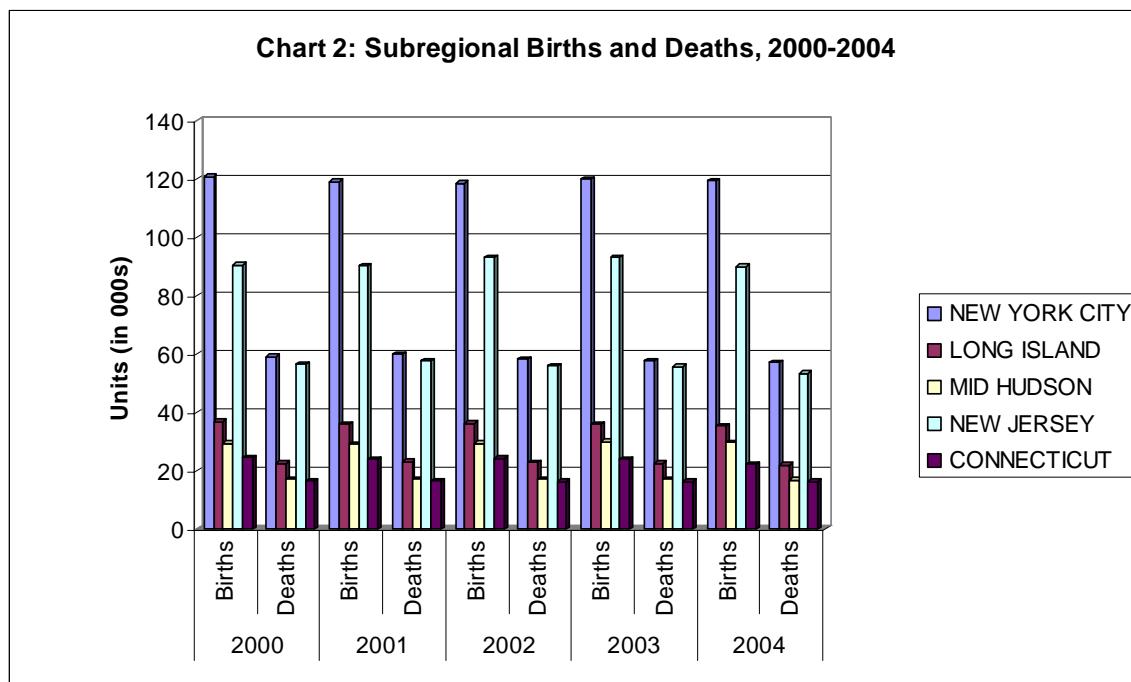

Overall, from 2000 to 2005, the population has increased by 2.8 percent or 602,800 persons. The components of growth- births, deaths, and net migration- provide insight into the factors causing demographic change.

Vital Statistics

Births

Part of the reason for the decline in rate of population growth is the decline in birth rates. On a regionwide basis, the number of births increased in only two years between 2000 and 2004. There was a 1.2 percent increase of 3,500 births between 2001 and 2002 and a 0.4 percent increase of 1,300 births from 2002 to 2003. Between 2000 and 2001 and between 2003 and 2004, the number of births decreased by 1.2 and 2.2 percent respectively.

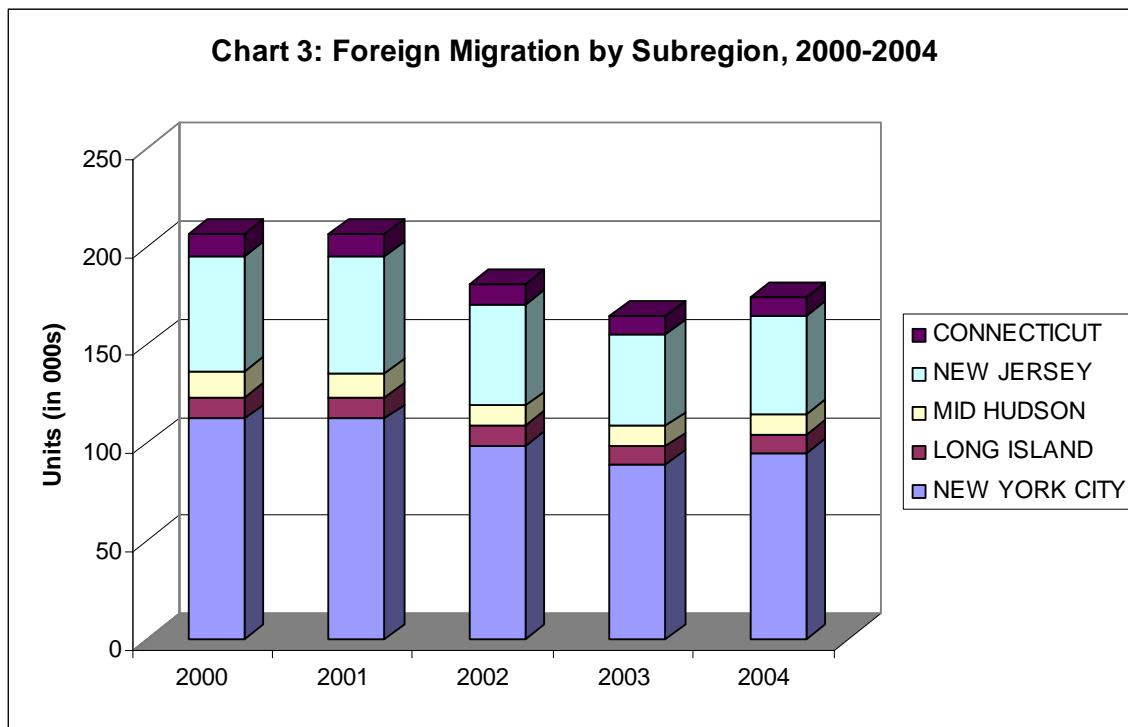

In New York City, births declined each year except in 2003, when the number of births increased by 1.5 percent over the previous year. Long Island, New Jersey and Connecticut saw their sole increase in births between the years 2001 and 2002 with a 0.5, 3.3, and 2.1 percent increase, respectively. The Mid Hudson experienced more years of growth in births, but not a continuous increase over the 5 year period.

Deaths

The number of deaths also decreased regionwide, with the exception of 2001 which had an increase of 2,900 deaths, or 1.7 percent, over the previous year. Over the course of the following three years the number of deaths decreased by 2.5 percent in 2002, 0.6 percent by 2003 and 2.1 percent in 2004. Overall from 2000 to 2004, the number of deaths decreased by 3.5 percent or 6,100 occurrences. Subregionally, increases in the number of deaths were universal between 2000 and 2001, as were decreases between all subsequent years for most subregions.

Net Migration, Foreign and Domestic

Net Foreign Migration

Between 2005 and 2005 the Region attracted nearly one million net new foreign immigrants. This Influx represents more than the overall gain of population (602,800 persons), indicating that foreign immigrants are displacing existing residents in the Region's population. With the exception of 2004, foreign in-migration has dropped steadily since 2001 as more stringent immigration screening processes have been put into place. There was only a 0.28 percent decline in net foreign migration into the Region between 2000 and 2001. The two subsequent years brought much larger drops of 12 and 9 percent respectively. There was a slight increase from 2003 to 2004 by 6 percent, or 9,622 people, but overall there was a 16 percent decrease or 32,383 fewer foreign immigrants between 2000 and 2004.

The declines were seen uniformly throughout the subregions with decreases of under 2 percent between 2000 and 2001, followed by decreases of up to 16 percent in 2001 and 2002, and 10 percent from 2002 to 2003.

Net Domestic Migration

The number of persons leaving the Region on an annual basis for other U.S. destinations has been increasing steadily from 173,600 in 2000 to 296,800 in 2004. This has represented an annual increase from 32,400 persons in 2000 to 39,400 persons in 2004. Between 2000 and 2001, there was a 18.7 percent increase in net domestic out-migration from the Region. The subsequent years brought smaller increases of 12.3, 11.2, and 15.3 percent respectively.

The net outflow of residents is universal to all subregions. However, a few of the more rural counties are experiencing growth as the migration trend moves from the urban to the suburban to more rural or outlying counties. Counties such as Richmond in NYC, Nassau on Long Island, Rockland in the Mid Hudson and Monmouth in NJ, just outside of the urban core of the Region, experienced increases in net migration in the first years of the study period. However in 2003 and 2004, they began to lose residents to other areas. The least urban counties: Sullivan County in New York; and Warren in New Jersey all experienced annual increases in net domestic migration from 2000 to 2004.

Population in Group Quarters and Households

Group Quarters Population

As of 2005, some 516,200 persons or 2.3 percent of the Region's population lived in group quarters. The Census Population Estimates Program records the population in group quarters at declining rate of growth on an annual basis for the Region as a whole. At its peak rate of growth, the group quarters population of the Region has grown by 1.19 percent or 5,984 persons between 2000 and 2001. Although still an increase, growth has been very slight between 2001 to 2002, 2002 to 2003 and 2003 to 2004, at 0.43, 0.41, and 0.37 respectively. Between 2004 and 2005, the group quarter population had a slight decrease by 0.13 percent, or a loss of 687 people.

An exception to this increase is New Jersey, which lost Group Quarters population between 2000 and 2001 by 0.06 percent but then continued to increase until 2006. The Connecticut subregion experienced an unusual 1.65 percent increase in group quarters population in the 2001-2002 period, with the increase not being attributable to a single new facility, but rather distributed among the three constituent counties.

Population in Households

As a derivative of Total Population and Population in Group Quarters, Population in Households experienced much the same growth pattern as total population. Fully 21.6 million residents of the Region live in households, or 97.7 percent of the total. The rate of growth of population in households slowed dramatically over the first five years of the decade, beginning with a 1.0 percent increase between 2000 and 2001 regionwide and gradually decreasing to a minute percent change between 2004 and 2005.

3.1 HOUSING DATA COLLECTION

Historical household and housing data were collected for the New York Metropolitan Region to provide background on the changing patterns of housing stock and flow relationships.

Household formation characteristics pertain to the number of households, population in households, and average household size. The Federal State Cooperative Program for Population Estimates no longer provides estimates of the number of households, thus it requires a linear regression to estimate it. The derivation of Average Household Size is based on the same technique. As this technical memorandum deals solely with data collection, this task will be left for a future work effort. Household population, however, is the direct difference of two estimated datasets, and as such is described in the Population data section.

Housing stock and flow measures account for the volume of housing, its periodic availability, and changes to the housing inventory over time by new construction, demolition, alterations, and net conversions/mergers. Annual intercensal estimates for the number of housing units at the county level are included for the years 2000 through 2005. These estimates are prepared by the Federal State Cooperative Program for Population Estimates and are provided by the US Bureau of the Census for all three states.⁶ As previously stated, the reference date for the population estimates is July 1 of each year and, with each estimate, the previous years are revised in order to publish more accurate data

The Census Bureau surveys residential building permit-issuing jurisdictions in the nation on a monthly basis for the record of new housing units authorized by permits. Permit-issuing jurisdictions are municipalities, the remainders of counties, townships, or incorporated towns. Data are classified by size of structure, (i.e. single family, 2 family, 3-4 family and 5+ family dwellings) number of buildings, units and valuation. The Bureau no longer collects data on demolitions and alterations. The number of units authorized by permits was used for this report. However, all municipalities in the Region are not included in the Bureau's data collection.

Data not available through the Census Bureau was obtained from individual county departments as follows: New Jersey county building permit data from 2000 to 2005 were obtained from the New Jersey Department of Labor and Workforce Development.

Connecticut is a special circumstance as the State does not recognize counties in an official capacity. Building permits data from 2000 to 2005 were collected from the Census Bureau or aggregated from the individual town building departments. Some towns were not able or willing to provide the data needed and these include: Brookfield, Darien, New Fairfield, Redding, Sherman, Weston, and Wilton in Fairfield County; Barkhamsted, Bethlehem, Bridgewater, Kent, Litchfield, North Canaan, Salisbury, Thomaston, Warren, and Washington in Litchfield County; and Beacon Falls, Bethany,

⁶ The Federal State Cooperative Program for Population Estimates are provided by the US Bureau of the Census; <http://www.census.gov/popest/estimates.php>; Published: March 22, 2007 Accessed: April 2007

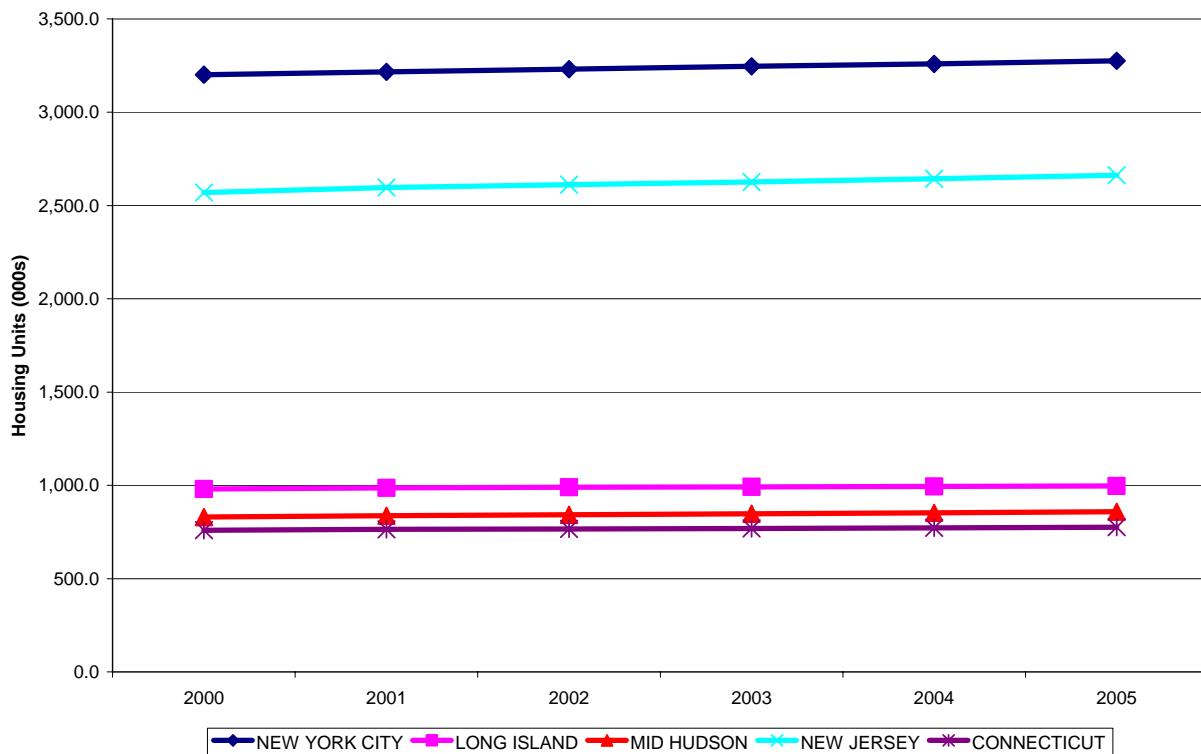

Branford, Derby, Middlebury, North Branford, Orange, Prospect, West Haven, and Woodbridge in New Haven County. All building permit data collected to date are included in Table 9. However, the discussion of trends will only concern the New Jersey and New York subregions.

3.2 SUMMARY FINDINGS OF HOUSING DATA TREND ANALYSIS

Housing Units

The amount of housing stock in the Region increased from 8.34 million units in 2000 to 8.57 million units in 2005. The rate of growth was fairly constant: a 0.7 percent increase in 2001, followed by 0.5 percent increases over the following three years, and concluding with a 0.6 percent increase in 2005.

Chart 4: Housing Units by Subregion 2000 to 2005

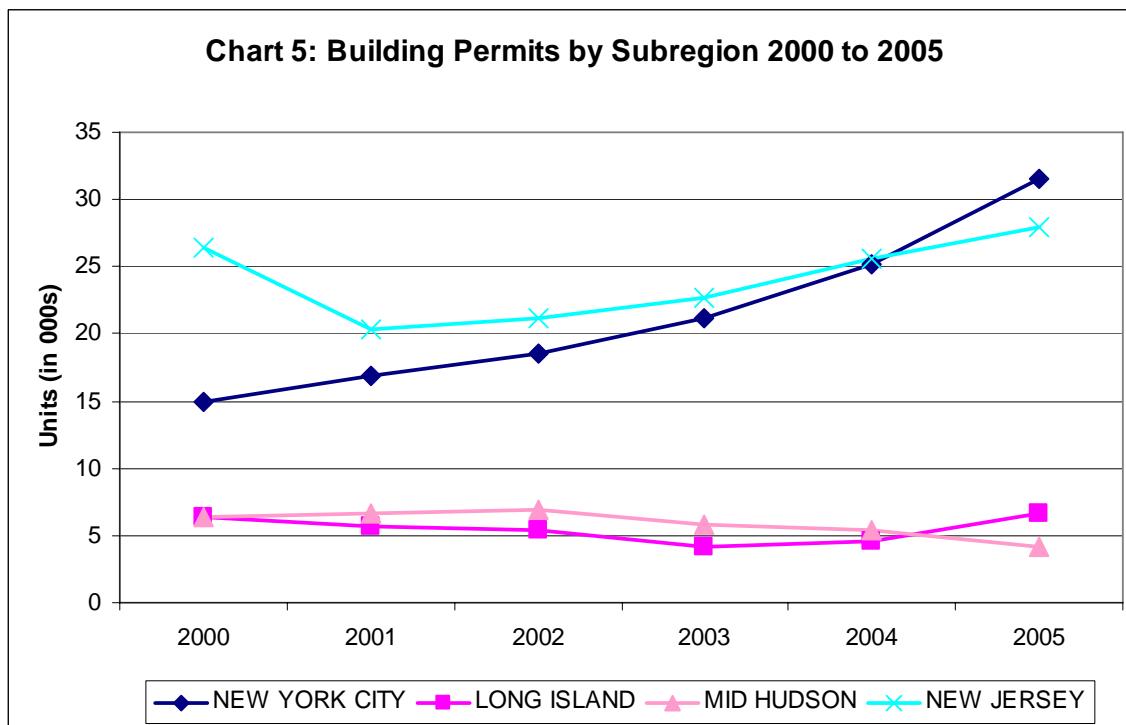

On a subregional basis, New Jersey added the most housing units in 2001, increasing in overall stock by a full one percent, although increases in subsequent years were more in keeping with the rest of the region, at 0.6 percent. New York City saw a 0.5 percent increase in stock each year except 2004, which had an increase of only 0.4 percent over the previous year. Connecticut and the Mid Hudson were also relatively steady, with annual growth vacillating between 0.4 and 0.5 percent and 0.8 and 0.6 percent respectively. Housing on Long Island showed the least growth, with a rate of 0.5

percent in 2001 declining by roughly one tenth of a percent each year to 0.2 percent in 2004 and 2005.

Building Permits

The issuance of building permits will only be discussed for the subregions of New York and New Jersey because, as was described previously, the Connecticut data for the constituent counties are not complete.

New York City showed the greatest and most marked increase in the number of permits issued each year. Despite a relatively slow start with a rate of increase of only 12.7 percent in 2001, the citywide increase in the number of permits issued was 25.4 percent in 2005 over 2004. By 2005, New York City was authorizing more than 30,000 housing units for construction.

The New Jersey subregion authorized a 6.1 percent increase in the number of housing permits between 2000 and 2005, but the annual increase ranged between -22.7 and 12.8 percent each year. The Mid Hudson subregion began the decade with increased permit authorizations. However, by 2002, the rate of issuance started to decline and has gone steadily downward since. Long Island issued the fewest building permits, with declining issuance from 2000 to 2003. In 2004 and 2005, greater numbers of permits were being issued in both Nassau and Suffolk Counties.

4.1 LABOR FORCE DATA COLLECTION

Average annual labor force data have been collected for the thirty-one counties in the New York Metropolitan Region. The labor force data include resident civilian labor force, resident employed labor force and resident unemployed labor force. Labor force data differ from employment data in that labor force data enumerate resident workers and nonworkers, regardless of place of work. Employment data enumerate workers by place of work, regardless of place of residence. The 2000 to 2005 data were collected from the Local Area Unemployment Survey (LAUS) of the New Jersey, New York, and Connecticut Departments of Labor (DOL).

The DOL labor force data are provided on a monthly basis and available approximately two months after collection. Average annual data are also available once the appropriate monthly data have been finalized. The data are periodically rebenchmarked to make them more consistent with the results of the most recent Census or with changes dictated by the Federal Bureau of Labor Statistics (BLS), which oversees the DOLs. The 2000-2005 data from New York and New Jersey were rebenchmarked in 2005. Connecticut data from 2003 to 2005 were rebenchmarked in 2005; 2002 data were rebenchmarked in 2004; and 2000 and 2001 data were rebenchmarked in 2002.

Civilian labor force, resident employment, and unemployment data for the Region can also be centrally retrieved from the US Bureau of Labor Statistics under the LAUS program. The data are compiled for approximately 6,800 areas, including metropolitan areas, nonmetropolitan labor markets, counties and county equivalents, and cities. Data can be extracted from the BLS Web site for all counties and many municipalities of the Region for the period 1990 to present.⁷ Historical data to the mid-1990s are available from the DOL offices.

For the most recent data, the New York State Department of Labor states that sub-state labor force statistics from January 2000 to the present are not comparable to data from earlier years due to a new estimating methodology implemented in January 2005. This is also the case for the nation as a whole.⁸ New Jersey's Department of Labor states that, beginning with the publication of January 2005 data, the US Bureau of Labor Statistics (BLS) introduced changes to the methodology for estimating monthly labor force and unemployment statistics for all states.⁹ Connecticut's Department of Labor noted that, due to the expansion of the Current Population Survey, data for January 2001 and later is not fully comparable with those of earlier periods.¹⁰ The BLS has also noted that on May 19, 2006, data for all of Connecticut's substate areas (including interstate areas) for 1999 were adjusted to be consistent with the new State totals. As a result, all supplemental maps and tables that were affected by these changes in

⁷ US Bureau of Labor Statistics, <http://www.bls.gov/>; Accessed: December 2006.

⁸ New York State Department of Labor, <http://www.labor.state.ny.us>; Accessed: December 2006.

⁹ New Jersey State Department of Labor, <http://www.nj.gov/labor/index.html>; Accessed: December 2006.

¹⁰ Connecticut State Department of Labor, <http://www.ctdol.state.ct.us/>; Accessed: December 2006.

Connecticut have been revised, and on April 14, data for all substate areas in Connecticut were corrected for January 2006.¹¹

DOL labor force data are also revised, if necessary, when the decennial Census is finished. Revision attempts to make the DOL statistics more consistent with the results of the Census. Revisions typically take place three or four years after the Census is taken.

4.2 SUMMARY FINDINGS OF LABOR FORCE DATA TREND ANALYSIS

Civilian Labor Force

On a regional basis, the civilian labor force (CLF) of the Region grew from 10.56 to 10.83 million between 2000 and 2005. This represents a 2.6 percent increase or 272,500 more people over the 5 year period. The greatest regionwide change took place between 2001 and 2002 in which the CLF grew by 1.5 percent or about 155,000 persons. The next greatest change took place between 2004 and 2005, during which the CLF increased by 0.8 percent, or 83,000 persons.

Growth was universal for the Long Island and Mid Hudson subregions, while New York City lost CLF in both 2003 and 2004 by 9,100 and 8,300 persons respectively. New Jersey also lost 12,200 persons in its CLF in 2004 despite increases in all other years.

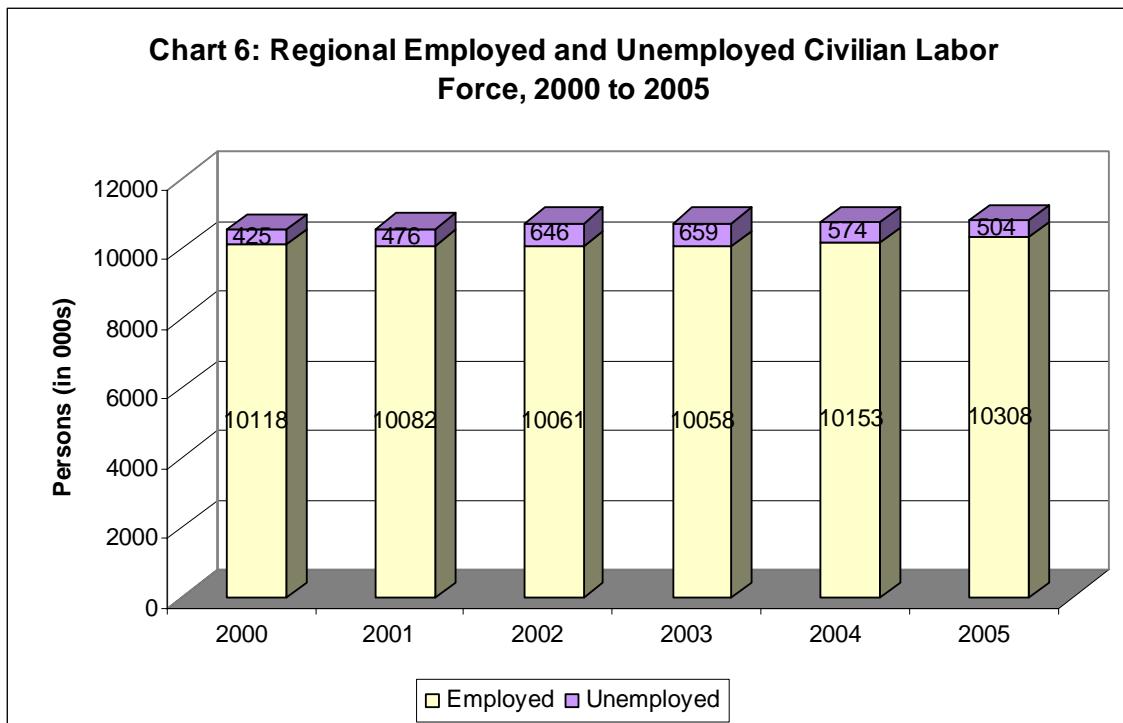

Employed Civilian Labor Force

The employed civilian labor force numbered 10.31 million in 2005, having risen by 189,900 persons over the 2000-2005 period. Despite declines in the employed civilian labor force in 2001 (0.4% loss), 2002 (0.2% loss) and 2003 (0.0002% loss), growth in the Region's labor force came back, surpassing the 2000 high point by 2004, and gaining an additional 154,800 employed residents in 2005.

New York City followed the regional trend but the City's greatest losses were in 2002, losing 29,300 employed residents. The City came back more strongly than the Region as a whole in 2005 however, with a 1.9 percent increase in total employed civilian labor force. By 2005, New York City's employed residents numbered 3.52 million or represented 34.1 percent of the Region's total.

The Mid Hudson subregion was one exception to the regional trend, gaining employed labor force throughout the first half of the decade.

¹¹ US Bureau of Labor Statistics, <http://www.bls.gov/>; Accessed: December 2006.

Unemployed Civilian Labor Force

In 2005, the unemployed labor force comprised 504,300 persons or 4.7 percent of the civilian labor force and a growth of 79,700 jobless person over 2000. The rate of change in the unemployed labor force for both the subregions and the Region as a whole reflected the economic uncertainty at the beginning of the decade. Between 2000 and 2001, the Region's unemployed labor force increased by 12.2 percent. However, this was only a precursor to 2002 which showed a 35.6 percent increase to 169,600 people in the unemployed population. By 2003, the economy was improving and the growth in unemployment had decreased to only 2.1 percent over the previous year, topping out at 645,900 unemployed residents. In 2004 and 2005, the number of unemployed members of the labor force began to decrease, dropping 13.1 percent and 12.1 percent respectively.

Most of the subregions followed the same pattern. Unemployment growth began in 2001, peaked in 2002 and recovery began in 2003, if only through the slowing growth of the unemployed. Connecticut, the hardest hit subregion in terms of percent change in unemployment, was anomalous in that 2001 showed the largest growth in resident unemployed (49.8%) followed by 2002 and 2003 (33.3% and 23.7%, respectively). Although the number of unemployed decreased by 10.3 percent in 2004, it had

increased by 0.3 percent in the following year, making Connecticut the only subregion that did not continue to improve in 2005.

5.1 EARNINGS DATA COLLECTION

Earnings data are critical in determining the supply and demand for all transportation projects. Earnings data consist of two data indicators: average annual earnings by industry from the three state's Department of Labor data and the Consumer Price Index from Bureau of Labor and Statistics.

Average annual earnings are derived from the Quarterly Census of Employment and Wages ES-202 (QCEW) data of the state Departments of Labor (2002-05). QCEW is a census of all employers liable for unemployment insurance (97-99% of total non-agricultural employment). This source excludes certain payroll employment not covered by unemployment insurance such as self-employed, unpaid family workers, railroad workers, student workers, and some agricultural workers. The quarterly data are available six months after the close of each quarter. The advantage of using this data is that it consists of a complete universe of employers and fine level of geographic and industry detail, while its limitation is a six month time lag and suppression of some data for confidentiality purposes.

New Jersey's 2002 to 2003 ES-202 data are benchmarked to 2003, while the 2004 to 2005 data are benchmarked to 2005. New York's 2002 to 2005 data are benchmarked to 2005 while Connecticut revises the previous year's data to the current year.

The industries reported are:

- Agricultural, Forestry, Fishing, and Hunting
- Construction
- Mining
- Utilities
- Manufacturing
- Wholesale Trade
- Retail Trade
- Transportation and Warehousing
- Information
- Finance and Insurance
- Real Estate and Rental and Leasing
- Professional and technical services
- Management of companies and enterprises
- Administrative and Waste Services
- Educational services
- Health Care and Social Assistance
- Arts, entertainment, and recreation
- Accommodation and Food Services
- Other services, except public administration
- Government
- Unclassified

The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services.¹² The CPI is calculated by obtaining prices for the goods and services in 87 urban areas throughout the country and from about 23,000 retail and service organization. Data on rents are put together from about 50,000 landlords or tenants. The weight for an item results from reported expenditures on that item as estimated by the Consumer Expenditure Survey.¹³

The CPI affects nearly all residents and is vital to urban planning projects. Its major uses are as an economic indicator, as a deflator of other economic series and as a means of adjusting dollar values.¹⁴ The CPI data were obtained from the Bureau of Labor Statistics on a monthly basis from 2000 to 2006.

5.2 SUMMARY FINDINGS OF EARNINGS DATA TREND ANALYSIS

Worker Earnings by Industry

In the greater New York Metropolitan Region in 2002, the average worker earnings for all industries were \$57,600, and increased by 3.6 percent to \$59,500 in 2003. Since then, the average worker earnings have continued to rise. By 2005, the average was \$65,400, approximately \$7,700 more than it had been three years earlier. Regionwide, those working in Finance and insurance have the highest average wage (ranging from \$125,600 in 2002 to \$154,200 in 2005), followed by Management of companies and enterprises (\$109,800 in 2002, \$128,800 in 2005). Persons in Accommodations and Food Services earned the least (\$20,400 in 2002, \$22,100 in 2005).

Of the subregions, New York City had the highest average worker earnings at \$78,400 in 2002, increasing to \$89,000 in 2005. Long Island had the lowest worker earnings with an average of \$40,400 in 2002, growing only to \$44,700 in 2005.

CPI

The inflation rate has increased by an average of 3.1 percent per year from 2000 to 2005. The rates of increase have ranged from 2.5 percent between 2001 and 2002 and 3.9 percent between 2004 and 2005. From 2000 to 2005, the CPI increased by 30.2 points, or 16.5 percent. The CPI data are for the New York-Northern New Jersey-Long Island, NY-NJ-CT-PA Metro Area, and cannot be divided into the NYMTC Region and its subregional.

6.1 EMPLOYMENT DATA COLLECTION

One of the major goals of the NYMTC Demographic and Socioeconomic Forecasting Project is the recalibration of a long range employment model for the counties and subregions. Historical employment data serve as one of the bases for recalibrating the Employment Model. Data have been collected and analyzed from various state and federal sources to determine their suitability for use in the modeling process and to gain a deeper knowledge into the association between the current economic situation and past economic trends. A key issue in this regard is whether current conditions are merely part of a normal economic cycle or indicative of a fundamental shift in the regional economy. Of considerable insight in this regard is the performance of the dominant Services sector which, together with Transportation, Communications and Utilities, has received extensive treatment in this memorandum by disaggregation into component subsectors.

In order to gain a comprehensive view of regional economic development, employment data have been collected by industry on an annual basis for the past several years (2002-05). Data from the state Departments of Labor (DOLs) of New York, New Jersey and Connecticut comprise the major source of payroll employment information. As noted earlier, labor force data differ from employment data in that labor force data count employed and unemployed residents of an area regardless of where they work, while employment data cover workers in an area regardless of where they live.

Like the earnings data by industry, average annual employment data were also collected from ES-202 (QCEW) program. The industries reported are as follows:

- Agricultural, Forestry, Fishing, and Hunting
- Construction
- Mining
- Utilities
- Manufacturing
- Wholesale Trade
- Retail Trade
- Transportation and Warehousing
- Information
- Finance and Insurance
- Real Estate and Rental and Leasing
- Professional and technical services
- Management of companies and enterprises
- Administrative and Waste Services
- Educational services
- Health Care and Social Assistance
- Arts, entertainment, and recreation
- Accommodation and Food Services
- Other services, except public administration
- Government
- Unclassified

Data were also collected for nonagricultural on a quarterly basis employment from the Current Employment Statistics dataset of each state DOL from 2001 to 2005. This data is from a survey of a sample of employers, excluding the self-employed, agricultural, domestic, and military workers. Data are available on a monthly basis on the third week of the following month. The advantage of this dataset is that it is current employment data; however it is based upon a statistical sample, not the complete universe of employers. Unlike ES-202 data, which are available by county, nonagricultural data are available for the United States, states, metropolitan statistical areas (MSAs), and counties outside of MSAs. Data on employment covered by unemployment insurance were used to apportion the nonagricultural data to the counties.

New Jersey's 2001 to 2003 data are benchmarked to 2003, while the 2004 to 2005 data are benchmarked to 2005. New York's 2001 to 2005 data are benchmarked to the 2005 year. Connecticut's 2001 data are benchmarked to 2002, 2002 data to 2003, 2003 data to 2004, while 2004 and 2005 data are benchmarked for the year 2005.

The industries included in the data collection are:

- Total NonFarm
- Total Private
- Goods Producing
- Service-Providing
- Private Service-Providing
- Manufacturing
- Natural Resources, Mining and Construction
- Trade, Transportation, and Utilities
- Wholesale Trade
- Retail Trade
- Transportation, Warehousing, and Utilities
- Information
- Financial Activities
- Professional and Business Services
- Educational and Health Services
- Leisure and Hospitality
- Other services, except public administration
- Government

The third source of data was the Bureau of Economic Analysis (BEA), which collects its employment and earnings data quarterly. These data come primarily from the covered employment and earnings data supplied by the state DOLs. Covered employment and earnings data are collected quarterly from the unemployment tax returns filed by employers. BEA collects county-level data from all of the states and adjusts the data to account for employment not covered by unemployment taxes. BEA estimates the number of self-employed persons and their earnings from Schedule C forms attached to income tax returns. BEA estimates the number and earnings of partners in non-limited partnerships from Form 1065s filed with the federal government. Estimates for farm

proprietors come from estimates of the number of farms in each county. Recent data was collected from BEA for this report, which was most recently updated in April 2007.

The sectors reported are as follows:

- Proprietors
- Payroll Employment
 - Private Sector
 - Government

6.2 SUMMARY FINDINGS OF EMPLOYMENT DATA TREND ANALYSIS

Employment by Industry (Covered Employment)

The ES-202 data indicate that the Region has recovered from the economic downturn of 2000/2001. Total employment in 2005 was reported as 9.4 million jobs in the Region, an increase of 74,386 over the 2002 total, and a percent change of 0.8 percent.

In 2005 New York City and Long Island had just surpassed their 2002 employment by 9,390 and 26,430 jobs respectively, and employment began to increase in 2003 for Long Island and in 2004 for New York City. When looking solely at private employment, the New Jersey subregion had an employment increase between 2002 and 2003, however since then total employment has dropped by 0.1 percent in 2004 and increased by 0.1 percent in 2005.

In the Region, the highest concentration of employment was in the Government sector (1,436,500 in 2002 to 1,445,500 in 2005), followed by the Health Care and Social Assistance sector (1,215,400 in 2002 to 1,285,000 in 2005). Besides Mining and Agriculture, the least employment was in the Utilities sector (26,600 in 2002 to 24,500 in 2005). It should be noted that the Utilities sector has a high total average earnings which is only shared by a small number of employees.

Employment by Industry (Payroll Employment)

Total payroll employment in 2005 was reported as 9.8 million jobs in the Region, a 40,729 decrease from the 2002 total, and an annual percent change of 0.1 percent.

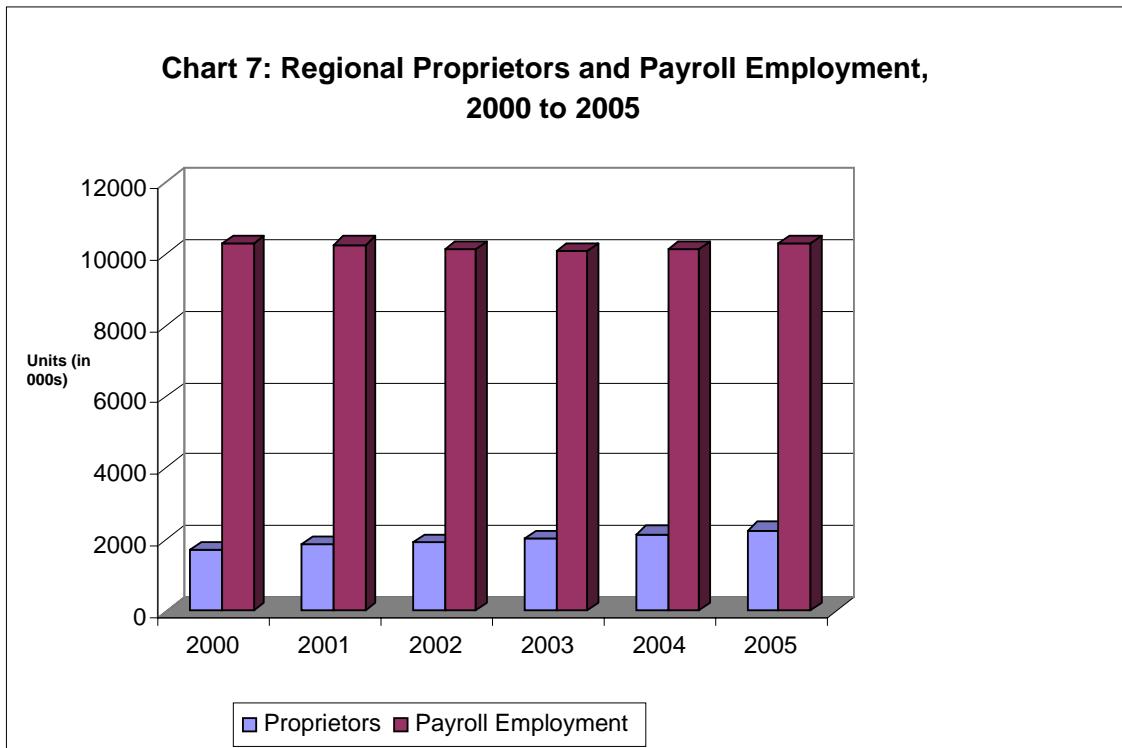

In 2005 Long Island, Mid Hudson, and New Jersey had just surpassed their 2002 employment by 22,058, 24,575, and 19,799, respectively. By that year, New York City and Connecticut had seen a decrease from the 2001 to 2005 employment level, by 92,708 and 14,454 jobs, respectively

In the Region, the highest concentration of employment was in the Trade, Transportation, & Utilities sector (1,896,100 in 2002 to 1,864,600 in 2005), followed by the Education and Health sector (1,510,500 in 2001 to 1,637,700 in 2005). The least amount of employment was in the Natural Resources, Mining and Construction sector

(374,800 in 2001 to 371,800 in 2005), with the majority of jobs concentrated in construction.

Proprietors Employment

BEA reports the self employment of proprietors increasing from 1.7 million in 2000 to 2.3 million in 2005. Payroll employment fluctuated over the five year period ending at 10.3 million jobs in 2005.

Of the subregions, New York City has the highest number of proprietors with 554,200 in 2000 and 761,600 in 2005. New York's lead is followed by New Jersey with 525,000 in 2000 and 684,800 in 2005.
