Technical Memorandum No. 1.4.3

Basic and Non-Basic Employment

1.1 INTRODUCTION

This Technical Memorandum (TM) presents year 2000 and post-9/11 (year 2002) estimates, as well as forecasts to 2025 for basic and non-basic primary employment by county, traffic analysis zone (TAZ) and minor civil division (MCD), as input to the Best Practices and Land Use Models. For this purpose, TAZs are comprised of individual census tracts and MCDs of municipalities as defined by the 1990 Census. The concept of primary employment, or the sum of basic and non-basic employment, is derived from the 1990 Census Transportation Planning Package (CTPP) and equates to employed workers at their work trip destinations.

Employment estimates are crucial in the transportation and land use modeling process because they directly affect trip generation rates and household location decisions that are key inputs in the forecasting of journey-to-work patterns. Basic employment forecasts are required at the zonal level as drivers of the Land Use Model (LUM). County level basic employment forecasts and their land use components are required as inputs to the exogenous build-out analysis that locates office, industrial, and regional retail facilities on developable sites for input to the LUM forecasting process.

As such, this TM represents an update of basic and non-basic employment estimates provided for 1990 and 1996 in TMDI TM 8.41.2, *Floorspace, Zoning & FARs: NYC & NYS*, and TMDI TM 8.42.2, *Floorspace, Zoning & FARs: NJ & CT*. It corresponds to the "CTPP Worker" concept presented in TMDI TM 8.41.7, *Current TAZ Employment and Earnings: NYC & NYS*, and TMDI TM 8.42.7, *Current MCD Employment and Earnings: NJ & CT*.

Basic employment is defined as employment located in detached office buildings, goods handling or industrial facilities, and regional retail centers. Non-basic employment is defined as all other employment by place of establishment, comprised chiefly of population-serving activities in the public sector, institutions, utilities, and smaller scale commercial concentrations. Office employment is defined as employment located in detached office buildings, comprised primarily (but not exclusively) of white collar work performed at desks in office floorspace. Regional retail employment is defined as employment located in commercial space of major central business districts and regional shopping malls of 750,000 square feet or more. It is comprised primarily (but not exclusively) of retail shops, entertainment, and personal services marketed to comparison goods shoppers.

Year 2000 employment estimates are provided at the census tract level for 5 counties (boroughs) in New York City, 7 suburban counties in New York State, Hudson County and Newark in New Jersey. Comparable estimates are provided at the municipal level for 13 counties in Jersey and 2 counties in Connecticut, or the geographical area inscribed within the zonal boundaries of the Best Practices and Land Use Models (i.e.,

excluding Sullivan and Ulster counties in New York, Mercer County in New Jersey, and Litchfield County in Connecticut as shown on Map 1).

Year 2002 or post 9/11 estimates are provided are similarly provided at the census tract and municipal level for the geographical area of the Best Practices and Land Use Models. These estimates were developed from the extensive research performed in Part Three of the Demographic and Socioeconomic Forecasting project: Post September 11th Impacts, specifically TM 3.1 & 3.2, *Inventory of Affected Businesses; Telephone and Mail Surveys of Affected Businesses*. This research traced the relocation of firms displaced from the 31 destroyed and damaged buildings of Lower Manhattan to determine their ultimate destination, employment and space characteristics on an address-specific basis. Final addresses were geocoded to census tract and municipal levels for reconciliation with the year 2000 or pre 9/11 employment.

The total employment concept governing estimates in TM 1.4.3 is the “primary job” concept, analogous to the employment response to the Household Interview Survey (HIS) of the Best Practices Model (BPM) and consistent with the worker measure of the 1990 Census Transportation Planning Package (CTPP). Primary employment level estimates and forecasts will not be equal to county employment estimates or forecasts for payroll or total employment (DSF TM 1.1.2, *Employment Data Collection and Analysis*, or DSF TM 1.3.2, *Employment Forecasting and Analysis*). These larger estimates and forecasts include multiple jobs of individual workers and jobs of workers not journeying-to-work during the April survey reference period. Primary employment estimates are, however, driven by changes in annual average payroll employment by industry and occupation.

All estimates and forecasts contained in this TM are available in Microsoft Excel files. Data have also been conveyed to the Best Practices Model in ASCII files. This memorandum provides a description of the employment concepts, data sources, estimating methods and limitations. This is followed by a tabular presentation of primary employment data for 2000, post-9/11 or 2002, 2005 and every five years at the county and TAZ/MCD level to 2025. It concludes with a description of computer data files accompanying this memorandum.

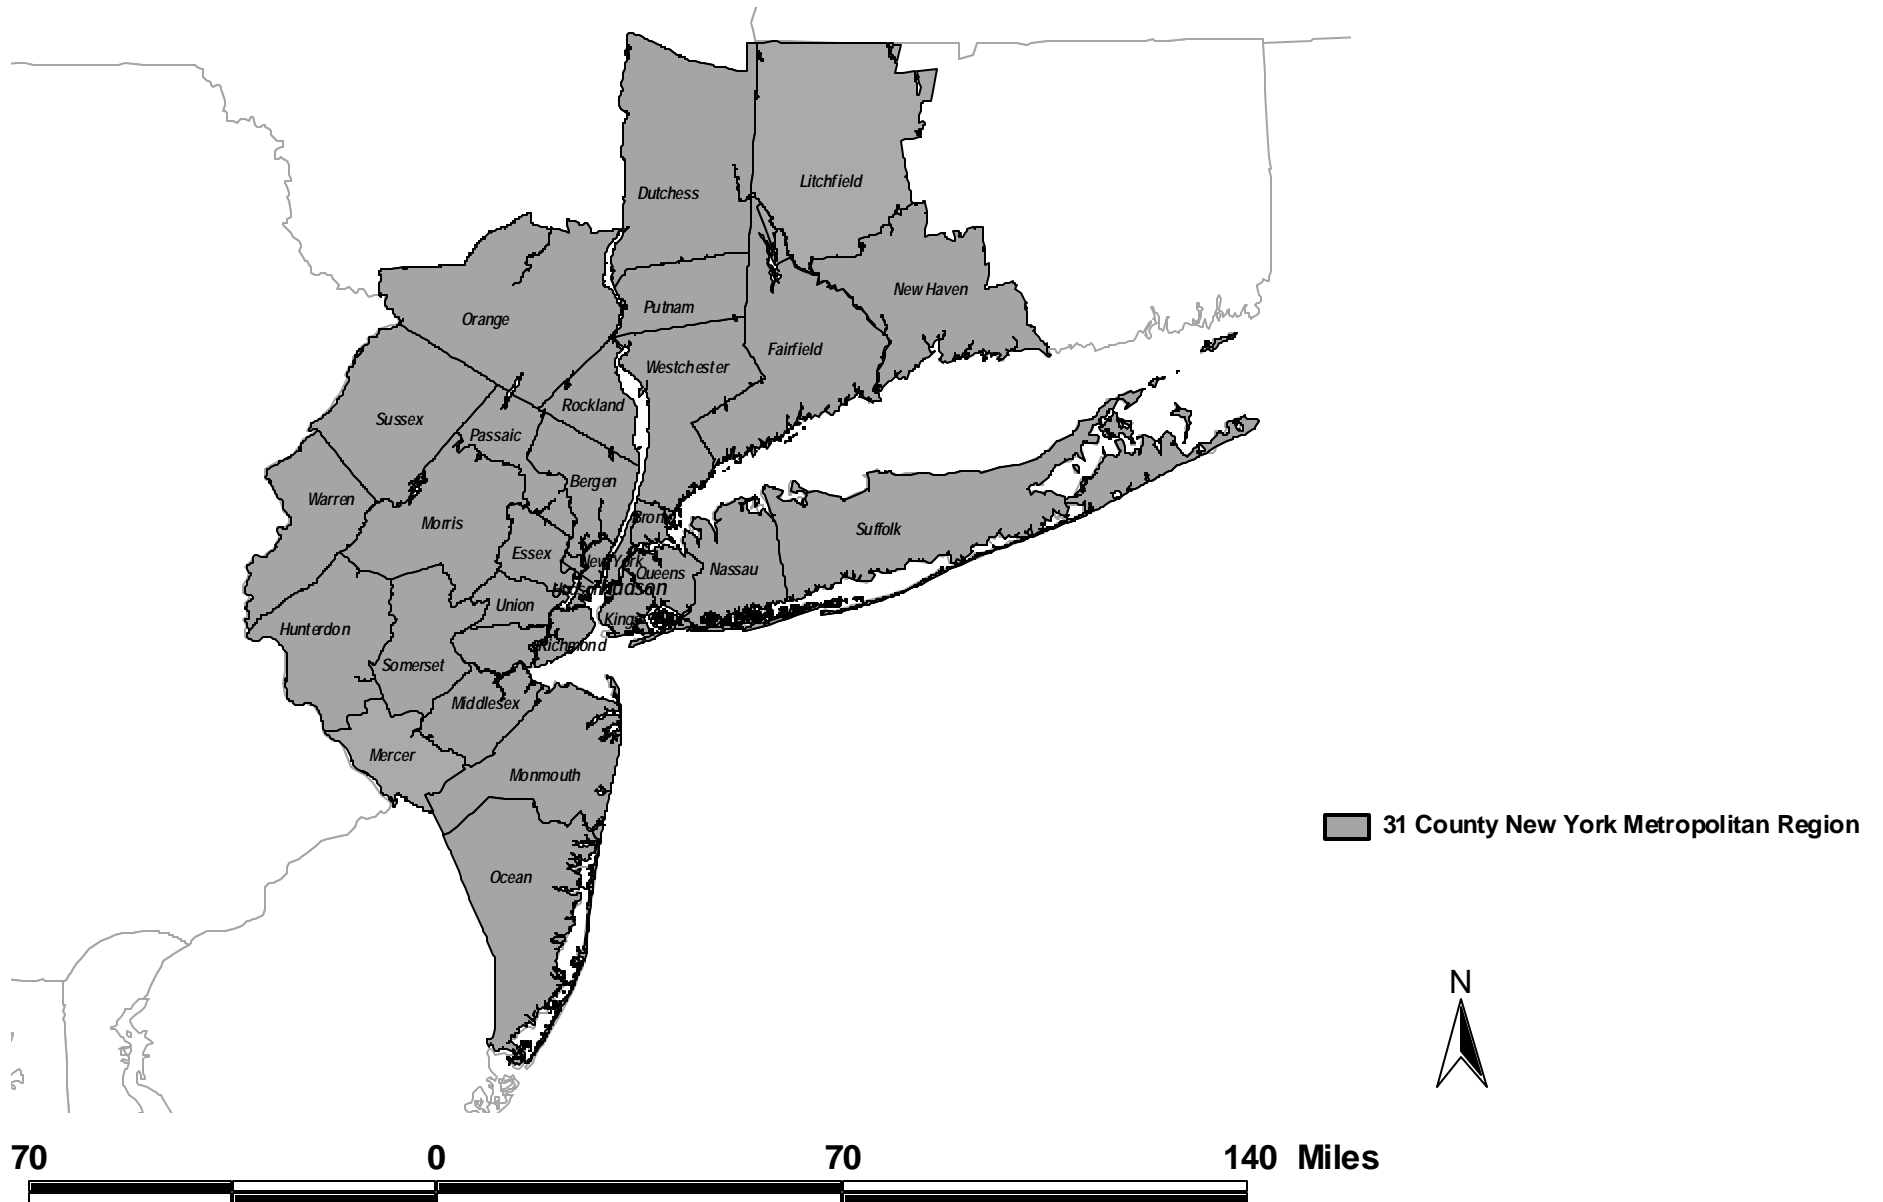

1.2 OVERVIEW OF METHODOLOGY AND DATA SOURCES

Employment Concepts

Three distinct employment concepts have been used in the Transportation Models and Data Initiative (TMDI) project, and two have been used prior to this TM in the Demographic and Socioeconomic Forecasting (DSF) project. It is necessary to explain how the current estimates and forecasts of primary employment by basic and non-basic component, and land use category, relate to these concepts:

- Total Employment is comprised of all payroll and self-employment opportunities by place of work, disaggregated by major industry division. It is available annually on a county level (31 counties), historically (TMDI TMs 7.1 & 8.13, 1970-1996; DSF TM 1.1.2, 1970-1999) as well as forecasted (TMDI TM 8.8, 1995-2020; DSF TM 1.3.2, 2000-2025). Total Employment includes primary and multiple jobs of a non-farm earner (unpaid family

Map 1. Thirty-One County Region

workers excluded) that are both trip-based and work at home, as well as full-time and part-time opportunities. Total Employment estimates were produced from data maintained by the US Bureau of Economic Analysis (BEA), US Bureau of Labor Statistics, and the respective state Departments of Labor (DOLs)

- Payroll Employment is comprised of all nonagricultural payroll employment by place of work, disaggregated by major industry division. It is available annually on a county level (31 counties), historically (TMDI TMs 7.1 & 8.13, 1970-1996; DSF TM 1.1.2, 1970-1999) as well as forecasted (TMDI TM 8.8, 1995-2020; DSF TM 1.3.2, 2000-2025). Payroll Employment includes primary and multiple jobs of a non-farm wage and salary earner, as well as full-time and part-time work, and is reported from the work-site establishment. Because some large multi-establishment firms report employment from their payroll office location, discrepancies persist with respect to trip end employment and particularly affect the accuracy of central business district employment estimates.

This employment concept is measured by the state DOLs, from unemployment insurance coverage data (ES-202), in compliance with a uniformly imposed BLS methodology. Payroll Employment is greater in coverage than ES-202 employment; payroll employment does include telecommuters; and payroll employment is closest in volume to the 1990 CTPP trip based employment measure. Because Payroll Employment is frequently reported by labor market (comprised of multiple counties or parts of counties), ES-202 employment is used to disaggregate the county components. ES-202 employment is also available at the zip zone and municipal level and is used to estimate TAZ/MCD primary employment.

- Self Employment is comprised of nonagricultural proprietors by place of work. According to BEA, proprietors employment consists of the number of sole proprietorships and the number of partners in partnerships.
- CTPP Workers is comprised of employed persons responding to the 1990 Census (a 5% weighted sample; excluding an undercount of roughly one half million persons in the NYMTC study area). Respondents were at work during the reference week in April 1990 and reported their trip-based destinations or work at home by major industry division (with service industry sub-categories), class of work, and other characteristics. Weighted estimates of total workers are available on a census block group/tract/place/county-subdivision and county level for the decennial year. The CTPP employment concept excludes multiple jobs of an earner (whether payroll or self employed) as well as primary jobs of other workers who were not at work during the reference week for reasons of illness, vacation, labor disruption, seasonal employment, or other purpose, and primary employment of other persons who were not enumerated by the census. 2000 Census CTPP data are not yet available for the New York Metro Region.

Employment Estimation & Forecasting Controls

From prior work performed on the Demographic and Socioeconomic Forecasting project, and cross-accepted by NYMTC partners, the following employment controls exist by place of work at the county level, for the past (1970-1999) and forecasted (2000-2025) periods. For each of 12 counties in New York State, 13 counties in New Jersey, and 2 counties in Connecticut, the following county level employment series are available in TM 1.1.2 and forecasted in TM 1.3.2:

- Total Employment
- NonFarm Proprietors (Self employment)
- NonFarm Payroll Employment
- Mining
- Construction
- Transportation
- Communications & Utilities
- Wholesale Trade
- Retail Trade
- Finance, Insurance. & Real Estate
- Personal Services
- Entertainment Services
- Business Services
- Health Services
- Educational Services
- Social Services
- Other Services
- Government

In addition to the industry employment time series and forecast at the county level, an occupational employment forecast was prepared at the subregional level and presented in DSF TM 1.3.2 for the period 2000-2025. It consists of work place employment by the following occupational categories:

- Managerial
- Profession & Technical
- Sales
- Clerical
- Service
- Agricultural

- Craft
- Operatives & Laborers

As a consequence of the events of 9/11 and the prolonged recession that enveloped the Region, that alter its outlook for recovery, the county level employment forecasts of TM 1.3.2 were revised by the research performed in Part Three of the Demographic and Socioeconomic Forecasting project: Post September 11th Impacts. TM 3.3, *Report of Findings and Rebenchmarked Forecasts*, contains the revised county level forecasts of total employment, non-farm payroll and self employment by five year interval to 2025. These forecasts, shown in Table 15, reflect the impact of post 9/11 relocations at the county level, the indirect and recession-induced effects of the 2001-2002 period, and generally accepted assumptions regarding the regional economy's recovery to 2005. These assumptions are shown in Table 14 and the recession related effects in Table 13 of TM 3.3.

Employment by Non-residential Land Use

Employment controls are not available on a time series or geographic basis for employment by land use type (e.g., office, other commercial), nor do employment forecasts exist for CTPP Workers. It was necessary to scale total employment forecasts by county to a CTPP Worker basis, using changes in Non-Farm Payroll Employment, and to convert the industry and occupational components of the forecasts to a land use equivalent. This was facilitated by the land use category assignments contained in TMDI TM 8.41.2 that assumed for 1990, and subsequently for 1996, the following aggregation of CTPP-based industry-specific employment to five non-residential land uses:

Office Employment

- Communications and other public utilities (part)
- Finance, insurance and real estate
- Business and repair services (part)
- Other professional and related services (part)
- Public administration (part)
- Mining (depending upon county)

Other Commercial Employment

- Retail
- Personal services
- Entertainment and recreation services
- Business and repair services (part)

Industrial Employment

- Manufacturing
- Wholesale

Institutional

- Health services
- Educational services
- Other professional and related services (part)
- Public administration (part)

Other Non-Residential

- Agriculture, forestry, and fisheries
- Mining (depending upon county)
- Construction
- Transportation
- Communications and other public utilities (part)

Total Non-Residential

- All Industries

Where industries were split between land use categories, occupational trends were utilized to apportion the employment forecasts at the county level. It should be noted that since Non-Farm Payroll Employment is closest in volume to CTPP-based employment levels, self-employment is not utilized in travel demand forecasting. In actuality, the rise in self-employment is a better indicator of work at home, telecommuting and multiple job-holding trends, than trip based employment, because a considerable amount of self-employment is double-job holding, not primary employment, and part-time not full-time work.

TAZ/MCD Estimation Methodology

Because primary jobs of a trip based nature are the major concern of travel demand forecasting – with multiple jobs, work at home, and non-work trips relegated to lesser importance -- the CTPP Worker concept is the most appropriate “primary job” employment concept for travel demand modeling purposes. The other employment concepts, for which forecasts exist, are utilized in a supporting manner to update and project the CTPP measure. Therefore, the following approach was taken in the production of year 2000 TAZ/MCD level employment estimates and is consistent with the methodology used in TMDI TM 8.41/42.2.

ES-202 employment/establishment/earnings data were acquired in an unsuppressed form at the 5-digit zip zone level in New York State and at the municipal level in New Jersey and Connecticut from the respective state DOLs by 2-digit industry (major industry divisions and sub-categories), for 1996 and 2000. For each zip zone or municipality, data were compiled

from the 2-digit industry level to the land use category level by the land use/industry assignments described above. By county, zip zone data were adjusted to conform to the change in Payroll Employment (1996-2000) at the county level, to account for the unreported employment not covered for unemployment insurance purposes and the ES-202 employment not distributed by zip zone. In the context of countywide total employment, these adjustments were minor.

Once adjusted, the increment/decrement in ES-202 employment by zip zone and land use type for the period 1996 to 2000 was applied to the 1996 CTPP Worker estimate of trip-end destinations by TAZ/MCD that was prepared for TMDI TM 8.41/42.2. For New York City and New York State suburbs, this entailed use of MABEL, the Census Bureau's geographic equivalency file which provides factors expressing the spatial relationship between census tracts and zip zones. Typically, most zip zones are comprised of several whole and partial tracts, while any one census tract may be divided among several zip zones. In New York City, the component number of tracts to zones is greater than in the New York State suburban areas. To appropriately assign zip zone level employment changes to census tracts, the zip zone data were first arrayed by full or partial tracts for each year and the land use type employment changes were then calculated off each full or partial tract. The tract level employment was then aggregated across partial tracts to full tracts, and across full tracts to county totals. In instances where zip zones crossed county boundaries to included tracts in separate counties, the apportionment at the zip zone level occurred in both counties. Minor normalization of industry-specific results was necessary in the final stages of estimation.

Once land use type employment changes were determined for the period 1996-2000 by TAZ/MCD, the results were factored onto zone-level 1996 CTPP Worker primary employment in basic and non-basic sectors. This required the extraction of regional retail employment (as defined on p. 1, paragraph 4) from other commercial employment for inclusion with office and industrial employment in the basic employment sector. Prior work (TMDI TM 8.41/42.2) on the location of major regional malls by TAZ/MCD was utilized as the basis for extracting current estimates, supplemented by known recent developments (e.g., Pyramid Mall).

As noted previously, the final version of TM 1.4.3 presents forecasts that reflect the impact of September 11, 2001 on employment relocation. This impact has been factored onto a zone level employment estimate for the year 2002 based upon the geocoded findings presented in DSF TM 3.1 & 3.2. A further adjustment in total employment for the year 2005, as shown in Table 15 of TM 3.3 and carried forward in TM 1.4.3, reflects the assumption of slower regional recovery or the revised near term employment growth rates shown in Table 14 of TM 3.3. This county level incremental change, from 2002 to 2005, was applied to the new 2002 TAZ/MCD employment estimate to derive a 2005 level. Thereafter, the incremental changes of the original 2005 employment forecast, presented in TM 1.3.2 at the county level, were factored onto 2005 TAZ/MCD levels in proportion to the distribution of growth predicted at the zone level by the prior 2020 round of TAZ/MCD forecasts.

1.3 TABULAR PRESENTATION OF EMPLOYMENT ESTIMATES BY TAZ/MCD

Table 2 is a consolidated presentation of CTPP-Based Primary Employment by basic and non-basic sectors, with office, industrial and regional retail components of basic activity, as defined on page 1, shown separately for the years 2000, 2002, 2005, and by

5-year interval to 2025. Table 2a presents the estimates by census tract for New York City and New York State suburbs. Table 2b presents the estimates by municipality for New Jersey and Connecticut suburbs, and Table 2c presents the estimates by census tract for Newark and Hudson County, New Jersey.

1.4 TABULAR PRESENTATION OF EMPLOYMENT FORECASTS BY COUNTY

Table 1 presents CTPP-Based Primary Employment by basic and non-basic sectors, including office, industrial and regional retail employment, at the county level for the years 2000, 2002, 2005, and by 5-year interval to 2025. As such, it represents a county and regional aggregation of the zone-level estimates presented in Tables 2. Table 1 estimates are repeated in Table 3, a consolidated presentation of county level forecasts of CTPP-Based Primary Employment by 5-year interval to 2025. Table 3a presents total primary employment, Table 3b basic employment, Table 3c non-basic employment, Table 3d office employment, Table 3e industrial employment, Table 3f other commercial employment (including regional retail), and Table 3g institutional and other non-residential employment.

1.5 COMPUTER DATA FILES

This memorandum is in the file "TM1.4.3 - Text.DOC" and is in Microsoft Word 2000 format. Tables 1,2 and 3 are in a Microsoft Excel file labeled "TM143.XLS." ASCII files are labeled "TM143.TXT." The entire document is viewable in portable document format and entitled TM1.4.3.pdf.
